## RMO-1993

- 1. Let ABC be an acute-angled triangle and CD be the altitude through C. If AB=8 and CD=6, find the distance between the mid-points of AD and BC.
- 2. Prove that the ten's digit of any power of 3 is even. [e.g. the ten's digit of  $3^6 = 729$  is 2].
- 3. Suppose  $A_1A_2...A_{20}$  is a 20-sided regular polygon. How many non-isosceles (scalene) triangles can be formed whose vertices are among the vertices of the polygon but whose sides are not the sides of the polygon?
- 4. Let ABCD be a rectangle with AB = a and BC = b. Suppose  $r_1$  is the radius of the circle passing through A and B and touching CD; and similarly  $r_2$  is the radius of the circle passing through B and C and touching AD. Show that

$$r_1 + r_2 \ge \frac{5}{8}(a+b).$$

- 5. Show that  $19^{93} 13^{99}$  is a positive integer divisible by 162.
- 6. If a, b, c, d are four positive real numbers such that abcd = 1, prove that

$$(1+a)(1+b)(1+c)(1+d) \ge 16.$$

- 7. In a group of ten persons, each person is asked to write the sum of the ages of all the other 9 persons. If all the ten sums form the 9-element set {82, 83, 84, 85, 87, 89, 90, 91, 92} find the individual ages of the persons (assuming them to be whole numbers of years).
- 8. I have 6 friends and during a vacation I met them during several dinners. I found that I dined with all the 6 exactly on 1 day; with every 5 of them on 2 days; with every 4 of them on 3 days; with every 3 of them on 4 days; with every 2 of them on 5 days. Further every friend was present at 7 dinners and every friend was absent at 7 dinners. How many dinners did I have alone?
